

# EMPLOYMENT AND UNEMPLOYMENT

OCTOBER 1975

AUSTRALIAN BUREAU OF STATISTICS

CANBERRA

Reference No. 6.4

## EMPLOYMENT AND UNEMPLOYMENT, OCTOBER 1975 (Including revised estimates for the period from June 1971)

This bulletin contains particulars of the numbers of employed wage and salary earners (referred to in the tables as "employees"), job vacancies registered and unemployed persons.

Seasonally adjusted statistics appear in Tables 1, 8 and 9-12. The methods used in seasonally adjusting these statistics are explained in Seasonally Adjusted Indicators, 1975 (Reference No. 1.10).

Preliminary estimates of employees are published each month in *Employed Wage and Salary Earners*: Preliminary (Reference No. 6.12).

Revision of series. The estimates of employed wage and salary earners shown in this bulletin are based on benchmarks derived from the 1971 population census and other sources (see paragraph 7, page 2) and replace those published in previous issues. In addition, the industry estimates have been classified according to the Australian Standard Industrial Classification. Estimates previously published were based on the classification used for the 1966 population census.

For reasons of space it is not possible to include all of the revised estimates in this bulletin. Detailed estimates will be published in a special bulletin: Employed Wage and Salary Earners, June 1971 to June 1975 (Reference No. 6.23), to be issued shortly.

#### CONTENTS

12.	Persons receiving unemployment benefit, February 1974 to February 1976	18

NOTE. Inquiries concerning these statistics may be made in Canberra by telephoning Mr J. Christensen on 52 6655 or, in each State capital, by telephoning the office of the Australian Bureau of Statistics.

#### I. EMPLOYED WAGE AND SALARY EARNERS

The figures in this section generally relate only to civilian wage and salary earners, not the total labour force: they therefore exclude employers, self-employed persons, unpaid helpers and the unemployed. Also excluded, because of the inadequacy of current data, are wage and salary earners in agriculture and private households employing staff. For the sake of brevity, wage and salary earners are referred to in the tables as "employees". Defence forces are included in Table 1.

- 2. The data needed to derive the estimates for periods subsequent to the benchmark date (June 1971) are obtained from three main sources, namely, (a) current payroll tax returns; (b) current returns from government bodies; and (c) some other current returns of employment (e.g. for hospitals); the balance, i.e. unrecorded private employment, is estimated. At June 1971 recorded employment obtained from the foregoing sources accounted for about 90 per cent of the employees in the industries covered, as determined by the benchmarks.
- 3. The estimates in Tables 1 to 8, except those relating to government employees and defence forces, are based on comprehensive data (referred to herein as "benchmarks") derived for the purpose from the population census of June 1971 and other sources, (see paragraph 7). Month-to-month changes shown by current data (see paragraph 2) are linked to the benchmark data to derive the monthly estimates.
- 4. Although the series measure reasonably well the short-term trends in employment in the defined field, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and current data, and changes in such factors as labour turnover, multiple jobholding and part-time working all affect the trend over longer periods.

#### Concepts and definitions

5. The concepts and definitions applicable to these estimates are those adopted at the 1971 population census, which conformed closely to the recommendations of the Eighth International Conference of Labour Statisticians. At the census the following questions were asked in respect of all persons fifteen years of age and over:

"Did this person have a full or part-time job, or business or farm of any kind last week (even if this person was temporarily absent from a job because of sickness, holidays, industrial dispute, etc.)?"

"Did this person do any work at all last week for payment or profit (even if this person was working only part-time or helping without pay in a family business)?"

Provided they had not been temporarily laid off by their employers without pay for the whole of the week, persons who answered "yes" to either of these questions were classified as employed. Persons in this category were classified as wage or salary earners if on their census schedule they were stated to be "a wage or salary earner" in the job they held in the previous week.

6. Government employees comprise not only administrative employees, but also all other employees of government bodies (Australian, State, local and semi-government) on services such as railways, road transport, banks, postal and telecommunication, air transport, education (including universities), radio and television, police, public works, factories, departmental hospitals and institutions, etc.

#### Adoption of new benchmarks

- 7. As results from each successive population census become available it is customary to derive from them new benchmarks for the monthly employment series, and to revise the published estimates for all periods subsequent to the date of the previous census. Benchmarks for June 1971 were established by analysing data from the 1971 population census and other relevant sources such as special returns from government bodies and the Bureau's economic censuses and surveys.
- 8. For a number of reasons the estimates of employed wage and salary earners previously published for June 1971 differed from the corresponding figures obtained from the 1971 population census. The principal reasons for the differences are as follows:
  - (a) there is an unavoidable accumulation of errors in the intercensal employment estimates, e.g. in the estimates of movements in unrecorded employment;
  - (b) apart from the undercount to which population censuses are generally subject, evidence from census post-enumeration surveys indicates that the completion of census questionnaires by householders tends to identify a smaller number of persons as being in the labour force than do other methods of measurement (e.g. household surveys conducted by personal interview), and that components of the total labour force, such as employed wage and salary earners, tend to be affected in the same way;
  - (c) estimated monthly movements in civilian employment are derived mainly from returns from employers relating to establishments or enterprises, but the population census figures are derived from particulars recorded by individuals on census schedules. The latter do

not in all cases provide precise information to allow accurate coding of industry;

- (d) previously published estimates for June 1971 included about 7,000 male and 17,000 female trainee teachers who are not included in the new benchmarks or subsequent monthly estimates;
- (e) crews of overseas ships are excluded from the monthly employment estimates;
- (f) some persons are not enumerated in the census in the State or Territory in which they work, e.g. persons resident in New South Wales and working in the Australian Capital Territory and persons who at the time of the population census are on holidays interstate.
- 9. Population census data were not always accepted as a matter of course in determining the June 1971 benchmarks. The factors mentioned above were taken into account and particulars of employment obtained from other sources (see paragraph 7 above) were used in analysing and, where necessary, in revising the estimates. It should be noted that figures in this bulletin are subject to further revision as the results of later censuses and surveys become available.

#### Current data

- 10. Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.
- 11. In the States, payroll tax returns are lodged at present by all employers paying more than \$800 a week in wages (other than certain Australian Government bodies, religious and benevolent institutions, public hospitals and other similar organisations specifically exempted under the Australian and State Payroll Tax Acts, 1971-1975). Up to the end of 1975, payroll tax returns were lodged by employers paying more than \$400 a week in wages. This level of \$400 a week still applies to employers in the Territories.

#### Industry

12. The industry classification used in this bulletin is the Australian Standard Industrial Classification (ASIC), described in the Bureau publication Australian Standard Industrial Classification (Preliminary Edition), 1969, Volume 1. This industry classification is not directly comparable with those adopted for population censuses before 1971 and used in previously published estimates of civilian employees.

#### Estimates for earlier periods

- 13. For the period June 1966 to June 1971 detailed industry figures for each State and Australia and the government employment series were published in two special bulletins (Reference No. 6.23) issued on 24 April 1970 and 11 January 1972. However, estimates by industry in those bulletins are not directly comparable with the estimates by industry contained in this bulletin, due to the adoption of ASIC, (see previous paragraph).
- 14. It is expected that in due course a revised series will be published for the period June 1966 to May 1971, classified according to ASIC. However, it may not be possible to provide as much industry detail as for June 1971 and subsequent periods. ASIC estimates cannot be derived for periods prior to June 1966.
- 15. April 1973 included an unusual holiday period because Anzac Day fell two days after Easter Monday. This feature is thought to have had a depressing effect on the expansion of employment in the last pay-period of April and, by postponement, to have reinforced expansion in May. Such an effect remains in the seasonally adjusted, as well as the original figures.

#### Symbols and other usages

- . . Nil or less than 50 persons
- † Affected by industrial disputes
- Any discrepancies between totals and sums of components in tables are due to rounding.

<sup>(</sup>a) Vacancies notified to the C.E.S. which were still unfilled at the Friday nearest the end of the month and which employers claimed could be filled if labour were supplied immediately or within the following month. Vacancies for full-time, part-time, permanent, temporary, and seasonal positions are included. (b) Includes the Australian Capital Territory. (c) Includes the Northern Territory. (d) See note (a) to Table 8.

NOTE. Sample surveys were conducted by the Australian Bureau of Statistics in March 1974 and March 1975 to obtain information on the level and composition of job vacancies. For a number of reasons the estimates obtained from these surveys differed substantially from the numbers of vacancies registered with the Commonwealth Employment Service at those dates. For example, the survey estimates of total vacancies at March 1975 was 55,200. Results of the surveys and reasons why the survey estimates differ from C.E.S. statistics were published in Job Vacancies, March 1974 and March 1975 (Reference No. 6.49).

#### 3. UNEMPLOYED PERSONS

The tables in this section contain (a) estimates of the total number of persons unemployed, derived from the quarterly population survey, (b) the numbers registered with the Commonwealth Employment Service as unemployed, and (c) the number in respect of unemployment benefit.

## Total Unemployed Persons : Population Survey Estimates

- 2. The quarterly population survey is carried out on a sample basis throughout Australia in February, May, August and November each year. Interviews are conducted during a period of four weeks in the State capital cities and two weeks in other areas. Particulars of the number of persons employed or unemployed, and of the total labour force, are published each quarter in a mimeographed bulletin *The Labour Force* (Reference No. 6.20).
- 3. For purposes of the survey, unemployed persons are defined as all those who, during the whole of the week prior to the interview week, did no work at all and either:
  - (a) did not have a job or business and were actively looking for work (including those who stated that they would have looked for work if they had not been temporarily ill or believed no work was available or had not already made definite arrangements to start work in a new job after survey week), or
  - (b) had a job from which they were temporarily laid off without pay for the whole week.
- 4. Unemployed persons therefore comprise those looking for full-time work, those looking for part-time work and those temporarily laid off from either full-time or part-time jobs. This definition of unemployed persons conforms closely to that recommended by the Eighth International Conference of Labour Statisticians, Geneva, 1954.
- 5. Since the estimates are based on a sample, they

may differ from the figures that would have been obtained from a complete census using the same questionnaires and procedures. There are about two chances in three that the differences would be less than 4,000 for total unemployed males, less than 3,500 for total unemployed females and less than 5,000 for total unemployed persons, and about nineteen chances in twenty that they would be less than twice these figures. Further details about the survey and the reliability of estimates will be found in the quarterly bulletin *The Labour Force* (Reference No. 6.20).

- 6. The sample estimates will differ from the number of persons registered with the Commonwealth Employment Service (see Table 11) as not employed, awaiting placement in full-time employment, for a number of reasons, including the following:
  - (a) the survey estimates include persons looking for part-time work as well as those looking for full-time work,
  - (b) they exclude persons who did any work at all during the survey week, even though they may subsequently have become unemployed and registered with the Commonwealth Employment Service, or have done so little work as not to lose eligibility for unemployment benefit,
  - (c) they represent averages over a period (see paragraph 2), whereas the numbers registered refer to a particular day,
  - (d) they are subject to sampling variability (see paragraph 5),
  - (e) they include some unemployed persons (particularly females) who do not register with the Commonwealth Employment Service, and
  - (f) they exclude any persons registered as unemployed who find jobs but do not notify the Commonwealth Employment Service at once that they have done so.

(a) Aged 15 years and over. For definition, see page 15. (b) The number of unemployed in each group as a percentage of the labour force in the same group. (c) See note (a) to Table 8. (d) All adjustment methods which compute seasonal factors as some average of the seasonal pattern for previous years are subject to inherent limitations when the pattern changes. The method currently used assumes that seasonal variations (such as that which occurs in November when young people leave school and seek employment) are proportional to the level of the series. However, when the number of unemployed becomes exceptionally high this proportional relationship may change. If it does, the change cannot be accommodated quickly enough by the current method. Such a change has been occurring in recent periods and as a result the seasonally adjusted figures for November and subsequent periods are understated while those for the preceding period are overstated. It is difficult in these circumstances to draw any reliable conclusions from the movement in the seasonally adjusted figures in recent periods. (e) The sample size was reduced for the November 1975 survey. Consequently the standard errors for estimates from that survey are larger than usual. For details see the November 1975 issue of The Labour Force (Reference No. 6.20). (f) Preliminary estimates, subject to revision.

<sup>\*</sup> Estimates less than 4,000 are not published, because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can be derived, they should not be regarded as reliable.

<sup>††</sup> Affected by the deferral of the interviewing period by one week. It is estimated that had interviewing taken place in the normal period, the seasonally adjusted figure for persons would have been higher by some 5,000 to 10,000.

<sup>(</sup>a) Comprises all persons who were still registered with the Commonwealth Employment Service (C.E.S.) at the Friday nearest the end of the month, who claimed when registering that they were not employed, and who were seeking full-time employment, i.e. 35 hours or more per week. They include persons referred to employers but whose employment was still unconfirmed, and persons who had recently obtained employment without notifying the C.E.S., all recipients of unemployment benefit are included, (see Table 12). (b) Includes the Australian Capital Territory. (c) Includes the Northern Territory. (d) See note (a) to Table 8 and note (d) to Table 10.

<sup>(</sup>a) Number on benefit at Saturday nearest the end of the month. State and Territory classification is based on location of office from which payment of benefit is made. (b) See note (d) to Table 8. (c) Figures for April 1975 and subsequent months are not strictly comparable with those for earlier months due to the introduction of new administrative procedures.
